

# Hepatitis B: A Silent Killer

*You may be at risk for liver cancer, ask your doctor!*

## The Facts

- Liver cancer from hepatitis B is a leading cause of death for Asians and Pacific Islanders (APIs).
- 1 in 10 APIs is chronically infected with hepatitis B; 2/3 of them do not know they are infected.
- Without early detection and proper care, 1 in 4 chronically infected APIs will die from liver cancer.
- Hepatitis B testing is not routine in all blood work, ask your doctor for it!

B a hero!
